

Rivets

or Riv-Nails are an assembly of a rivet and a pilot nail. The rivet is a specially designed semi-tubular rivet sized to fit a range of conveyor belt thicknesses. The rivet is "up-set" by the upper head of the pilot nail to clinch and maintain compression of the upper and lower plates of the belt fastener. The pilot nail has a point used to guide through the belt and into the anvil setting tool. Upon completion of the belt splice, the rivet and the pilot nail separate.

Steel Rivets

will be color-coded zinc dichromate, a gold color. While zinc dichromate has higher resistance to corrosion than conventional zinc silver, the product should not be used for corrosive applications.

Stainless Steel Rivets

are silver color-coded with a zinc "silver" pilot nail. Stainless steel rivets should be used with the RC and RS series stainless fastener strips where rusting out of the rivet is common.

STEEL RIVETS 250/BOX

| ITEM | PRICE |
|-------|----------|
| RN1 | \$ 51.40 |
| RN2 | 51.40 |
| RNA | 51.04 |
