

Cam and Groove

Boss-Lock PF Cam and Groove

The shank design on these fittings was developed specifically for chemical transport hoses having Crosslinked Polyethylene (XLPE) or Ultra High Molecular Weight Polyethylene (UHMW) tubes, where shank retention can be a problem when using conventional band clamps. In testing tank transport hoses from a wide variety of manufacturers, the Boss-Lock-PF fitting showed significant improvement in hose coupling retention over the conventional cam and groove shank design. Other sizes are available on special order. *Consult the factory for pricing and availability.* For best results we recommend the use of 3/4" wide band clamps found on pages 286 and 287.
