

Shank Type Fittings

External Swage Notched Stems and Ferrules

STC200NOS

- When used with an appropriate notched ferrule, these fittings can be swaged or crimped onto hose, thereby providing improved shank retention. For hose O.D.'s of 2-4/64" and below, these couplings are to be crimped only. For hose O.D.'s of 2-5/64" and above, these couplings can be crimped or swaged.
- The stem can be removed from a damaged hose by cutting away the ferrule, without necessarily damaging the fitting. After inspection to determine its ALERT suitability for reuse, it can be reinstalled into another hose by using a new ferrule.
- Notched stems let you use the same ferrules used with the notched (NO) cam and groove and notched turned back nipples. This lets you maximize your inventory usage and reduce costs.
