

Fire Hose Fittings

Flat Seal Coupling Assemblies

Flat seal couplings are for lay flat hose and single jacket fire hose with a wall thickness between 5/64" and 3/16". Flat seal couplings are designed for use with flat seal clamps only. NPSM and NST coupling gaskets are available on page 223. Flat seal couplings for cam and groove are available on page 54.

Note: * Torque values for clamps are based on dry bolts.

The use of lubricants on bolts will adversely effect clamp performance.
