

Buttweld Fittings

Your applications demand quality and reliability with quick delivery. That's why businesses from dairy, food and beverage to pharmaceutical and cosmetics have trusted Bradford™ buttweld fittings since 1986.

Bradford™ buttweld fittings are manufactured to very high tolerances. Some elbows are manufactured using a hydroforming method, which makes a more uniform elbow that is easier to weld and polish. This manufacturing method allows us to supply our customers with a superior quality fitting regardless of the application.

Dixon Sanitary's quality butt-weld fittings are available from our thirteen distribution centers - so we can ship the parts you need within twenty-four hours.

G

Bradford™ quality: maintaining the standard

The Sanitary Standards were originally created by the dairy industry as a voluntary benchmark for sanitary safety. The standards are still developed collaboratively by a group of processors, suppliers, and sanitation specialists.

Dixon Sanitary has earned the 3A symbol through the Third Party Verification (TPV) program, which requires a professional assessment rather than voluntary compliance to make certain each product conforms in all respects to the published standard. The standards are accepted by the USDA and USFDA.

Bradford™ Sanitary Fittings meet 3A Sanitary Standards for Sanitary Fittings for Milk and Milk Products, Number 63-03 (Authorization number 621). See the Dixon Sanitary website, [www.dixon-sanitary.com](#), to download a PDF of the certificate or call Dixon Sanitary.

Dixon Sanitary is proud to be a participant in the 3A TPV program.
