

HEATER & COOLANT HOSES

Silicone Connectors

Parker offers a number of silicone hose connectors for use in automotive, heavy-duty trucking, marine and other high-performance, extreme-temperature applications. Custom constructions are also available for applications requiring unique configurations. Contact Parker Industrial Hose Division for specific information.

HUMP HOSE

- Utilized for movement and/or vibration in an application. The hump design allows the part to absorb the movement/vibration.
- Diameters and length of this hose can vary from 3" to 12".
- Temperature range: -65° to +350°F

REDUCERS

- Also referred to as step hoses because of the dimensional change from one side to the other.
- Common length is 3".
- Offered up to 5" and 6".
- Temperature range: -65° to +350°F

ELBOWS

- Most common: 45 and 90 degrees.
- Can be made as reducing elbows with one ID being larger than the other.
- Some elbows require one leg to be longer than the other.
- Caution should be used to ensure leg lengths are specified correctly.
- Temperature range: -65° to +350°F

MARINE EXHAUST HOSE

- For wet exhaust systems.
- Made to SAE J2006 specifications.
- Designed to be the connection at the engine-exhaust manifold.

SPECIALTY PRODUCTS

- Custom formed hoses made for coolant applications.
- Unique angles and dimensions.
- Made on special mandrels.
- Made to customer's print and specification.
