### Featured Product: X-treme Plus SF Silicone Series

This Super Flexible hose is a coolant / heater hose that is mandrel made in continuous lengths up to 130 feet, the longest length and most flexible silicone hose available in the industry. This hose is resistant to coolant solutions, cracking, ozone, cold leaks, peeling and aging. This product is made for extreme applications that require tight bends for connections between the radiator and the engine on heavy-duty equipment, buses, trucks, etc. The X-treme Plus SF has a Greek corrugated construction that allows this hose to be flexible enough to replace pre-formed elbows.

#### Circle of Safety

Many industrial hose manufacturers will suggest which coupling to use with which hose for a given application, but they won't guarantee that combination will perform to the rated burst pressure of the hose.

**Parker will.**

Our Circle of Safety program establishes Parker's Industrial Hose Division as a single, accountable source with a specific performance guarantee to protect distributors and end users from accidents, unplanned downtime and increased liability associated with ill-fated industrial hose assemblies.

## Circle of Safety Program Details

Looking for more information on the Circle of Safety program? Clicking on the Circle of Safety logo in this overview will display the full details of the program, including its features, advantages and benefits to end-users and distributors.
